2. The following is an examiner's statement of reasons for allowance: With respect to independent claim 1 of the instant invention is directed to a cable modem termination system (CMTS) having front and rear sides, the front side accepting electronic cards, electronic signals from which are transferred through connectors mounted to the rear side. The relevant prior art of record such as **Liva et al (2002/0093966)**, disclose enhanced CMTS for reliability, availability and serviceability. **Palatov (5,740,020)** discloses a computer housing and expansion card design, facilitates addition and removal of expansion cards from the front of a computer housing without disassembling of the housing. **Caldara et al (6,748,474)** discloses a chassis in the form of a mid-plane design, holds equipment that provides communication services. **Clement (5,726,668)** discloses programmable graphics panels in a system. **Struger et al (4,151,580)** disclose a ser of circuit boards mounted side by side and electrical connection is made to terminal pads. However, neither **Liva, Palatov, Caldara, Clement** nor **Struger** and any of the cited references teach or suggest, alone or in combination, the feature of a connector extending through the first opening of the at least one pair of first and second openings and operationally coupled to a corresponding electronic circuit card installed at the front side of the CMTS and a light source, visible through the second opening of at least one pair of first and second openings, the illumination status of which is determined by the corresponding electronic

Art Unit: 2617

card, as recited in the instant invention in combination with other features with respect to independent claim 1.

With respect to independent claim 10, neither **Liva, Palatov, Caldara, Clement** nor **Struger** and any of the cited references teach or suggest, alone or in combination, the feature of a connector extending through the first opening of the at least one pair of first and second openings and operationally coupled to a corresponding electronic circuit card installed at the front side of the CMTS, a controller connected to the first electronic circuit card for determining the status of channels associated with the first electronic circuit card and a light source visible through the second opening of at least one pair of first and second openings, the illumination status of which is determined by the controller, as recited in the instant invention in combination with other features with respect to independent claim 10.

With respect to independent claim 19, neither **Liva, Palatov, Caldara, Clement** nor **Struger** and any of the cited references teach or suggest, alone or in combination, the feature of a plurality of slots on the front side for accepting at least one electronic circuit card and a controller connected to each slot for determining whether an electronic circuit card is installed in the corresponding slot on the front side, as recited in combination with other features with respect to independent claim 19.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Budinger et al (6,802,032) disclose method and apparatus for performing system diagnostics on a cable modem termination system using a hand held computing device.

Follingstad et al (6,623,278) discloses high density patching system.

Miles (6,078,504) discloses universal adapter bracket for communications devices.

Lau (4,768,961) discloses Jackfield with front removable jack modules having lamp assemblies.
